

Assignment-Load JSON data from an S3 bucket

In this assignment you will load JSON data into a Snowflake table

A JSON file containing customer data is available at the following S3 bucket.

https://snowflake-essentials-json-lab.s3-ap-southeast-2.amazonaws.com/sample_data.json

Analyze the JSON file and load the data into a snowflake table.

*hint: this file is a complete JSON document , so you will need to load the complete JSON into a variant column and then extract the information from that variant column and load into a target table.

*hint: the Snowflake stage will point to the following bucket

s3://snowflake-essentials-json-lab

Questions for this assignment

How many rows are loaded?

how many customers are located in the city with the name Cornwall?
